

ABSTRACT

A joint for a panel, the joint including a first (1) edge and a second edge (11). The first (11) edge includes a groove (14) while the second edge (11) is provided with a tongue (24). The second edge (11) further includes an upper side groove (12). A joining profile (3) is provided with a tongue (31) and an intermediate section (33), the joining profile being (3) so configured so as to allow it to be located in the upper portion of the joint between two, joined, adjacent panels.
